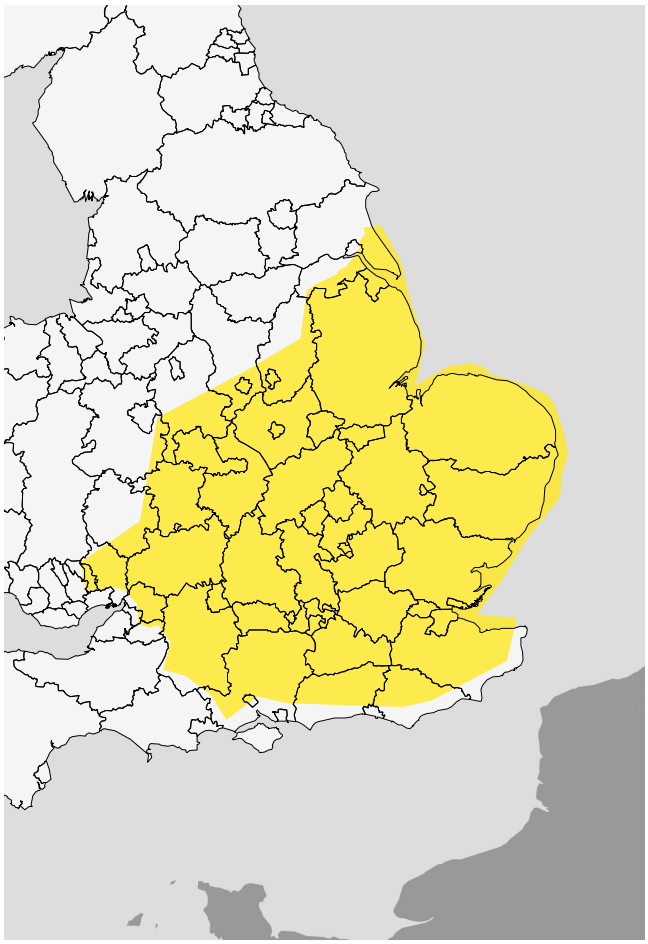
Yellow warning
Ice

Between
03:00 Sun 18 Dec 2022 and
11:00 Sun 18 Dec 2022



A period of rain and snow mixed falling on frozen surfaces will lead to icy conditions causing some travel disruption.

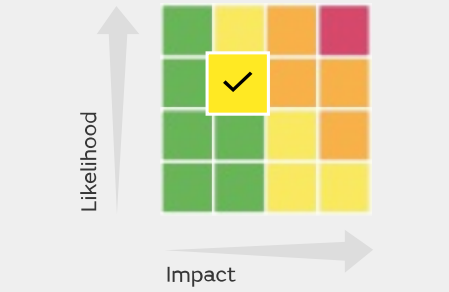
What to expect

- Some injuries from slips and falls on icy surfaces
- Probably some icy patches on some untreated roads, pavements and cycle paths
- There is a chance that road, air and rail services could be disrupted or delayed

Further details

Widespread frozen surfaces ahead of a band of rain, sleet and snow, pushing northeast across the UK though Sunday, leads to a risk of icy conditions through the morning, before conditions turning much milder from the west. Any sleet or snow in the south or southeast will likely only last an hour or two, before turning readily to rain, but this still onto frozen surfaces for a time. Any slight accumulations, likely no more than 1-2cm, and mostly over higher ground, will melt rapidly, which may briefly add to the ice risk.

In addition to the ice and snow risk, strong winds are expected, mainly over higher ground.



Medium likelihood of low impacts

Issued at 12:47 Thu 15 Dec, 2022
